

Nation Code

Initial installs

Let's get dev-ical.

{codenation}[®]

What we'll need

- } Visual Studio Code
 - } Node.js
 - } Git & a GitHub profile
 - } Discord
-
- } Using the following slides, follow the instructions, visit the links, and let's get installing!

Visual Studio Code

} <https://code.visualstudio.com/download>

Node.js

- } Close Visual Studio Code
- } <https://nodejs.org/en/>
- } Download the LTS version (Long Term Support)

GitHub

- } First let's make an account
- } <https://github.com>
- } Next let's install git
- } <https://git-scm.com/downloads>
- } MacOS user's follow the installation guide on the next slide

Installing git on MacOS

- } Open Terminal (CMD+Space and type "Terminal", hit enter)
- } Visit <https://brew.sh> and paste the code into Terminal to install homebrew
- } Once installed install git by typing the following command in Terminal, followed by enter:
- } `brew install git`

Confirming installation

- } Open Visual Studio Code (VSC)
- } Once open press CTRL+J (Windows) or CMD+J (MacOS)
- } Once the bottom panel appears click "Terminal"
- } Within Terminal type "node -v" and hit enter, if a version number is returned Node.js is successfully installed
- } Within Terminal type "git --version" and hit enter, if a version number is returned git is successfully installed
- } If a version number fails to display, first try to close and reopen VSC, and lastly reinstall the package if the issue persists

Discord

} <https://discord.com>

You're done, bud.

On your marks...

Let's get dev-ical.
